SUBJECT: Asbestos results for the New Vernon Asbestos site.

FROM: Philip R Campagna, Chemist  
USEPA/ERT

TO: Mike Neal  
EPA Region II

On August 24, 1990 the ERT collected dust and vacuum bag samples from seven residencies in New Vernon, New Jersey. These samples were then analysis by Scientific Laboratories, INC. for percent asbestos by weight following the procedure in the attached report.

The results of the asbestos analysis indicated that the following locations contained less than 1 % by weight asbestos; the background sample collected by vacuuming the rug at ERT, two samples from the Teilman, the vacuum sample from the Kehoe, the dust sample form the Driscoll, and the vacuum bag samples collected from the vacuum's at the following residencies Schmidt, Major, Larson, and Hamilton.

If you have any questions concerning these results or need further assistance please contact Sella Burchette or me.
